By attending this course, the participant will provide better patient care through an increased ability to

•Apply in practice the recent interventional, pharmacological, device based surgical advances in the treatment and management of cardiac arrhythmias, advanced heart failure and cardiogenic shock, cardiac transplantation, peripheral arterial disease, pulmonary hypertension, aneurysmal disease, and pulmonary embolism

•Utilize new medications and imaging modalities in the screening and management of ischemia, coronary artery disease, and hyperlipidemia

•Define evolving role of the cardiologist in the treatment of heart failure, hyperlipidemia, diabetes, and cardiovascular disease in women

•Discuss recent advances in medical, surgical, and percutaneous treatment for management of hypertension, left atrial occlusion, valvular heart disease, vascular disease, and Kawasaki disease

•Apply new and updated recommendations cardiovascular disease in women
